AIM: Link Jira tasks with Confluence to streamline task tracking and progress monitoring for the Library Management System development.

AIM: You are designing a Task Management System for a small team. The system should include the following features:

- [1] User Login and Role Assignment
- [2] Task Creation and Assignment
- [3] Task Prioritization and Deadlines
- [4] Progress Tracking and Reporting

Prioritize these requirements using the MoSCoW and Kano models in Jira.

The screenshot shows a Jira workspace titled 'Task Management System'. It features a navigation bar with tabs for Summary, List (selected), Board, Backlog, Development, Forms, Timeline, Docs, and Reports. Below the navigation bar is a search bar with 'Search work' and a 'Filter' button. The main content area displays a table of tasks. Each task row includes a checkbox, a task name with a Jira key (e.g., TMS-1), an assignee (Ganta Ramcharan), a reporter (Ganta Ramcharan), a priority (Must-Be, should, could, won't), a status (Done), and a resolution (Done). The tasks are: TMS-1 User Login, TMS-2 Task Creation, TMS-3 Task Prioritization, and TMS-4 Progress Tracking. At the bottom, there is a '+ Create' button and a pagination indicator '4 of 4'.
