Experiment [1]

AIM:

GOOGLE SHEET OR EXCEL – Use the following requirements for a Library Management System: Add a feature to search books by title and author. Implement an online book reservation system. Generate monthly reports on borrowed books for administrators. Enable email notifications for overdue books. Add support for QR code scanning for borrowing and returning books. Create a user-friendly dashboard for librarians. Allow users to review and rate books. Integrate a chatbot for user assistance. Develop a mobile app version of the system. Provide multi-language support. Categorize each requirement using MOSCOW Method (Must-Have, Should-Have, Could-Have, or Won't-Have) based on the following criteria: Impact on the users and stakeholders. Feasibility considering time, budget, and resource constraints. Finally Submit the completed Google Sheet or Excel file with all requirements categorized and justified.

	A	B	C	D
1	Library Management System - MoSCoW Prioritization			
2	S.No	Requirement	MoSCoW	Justification
3	1	Add a feature to search books by title and author.	Must-Have	Essential for finding books; system is unusable without it.
4	2	Implement an online book reservation system.	Should-Have	Convenient, but not required for basic library functions.
5	3	Generate monthly reports on borrowed books for administrators.	Must-Have	Crucial for management, tracking trends, and decisions.
6	4	Enable email notifications for overdue books.	Should-Have	Reduces overdue; manual reminders serve as a fallback.
7	5	Add support for QR code scanning for borrowing and returning books.	Could-Have	Speeds transactions, though manual/barcode entry works.
8	6	Create a user-friendly dashboard for librarians.	Should-Have	Improves productivity, but a simpler interface suffices.
9	7	Allow users to review and rate books.	Could-Have	Boosts engagement, but unneeded for core operations.
10	8	Integrate a chatbot for user assistance.	Could-Have	Offers extra support, though staff can handle manually.
11	9	Develop a mobile app version of the system.	Won't-Have	Good for future expansion, but costly to develop now.
12	10	Provide multi-language support.	Could-Have	Increases accessibility, but non-essential for initial launch.
